ECOLABNET

# PURPOSE OF THE REPORT

This visual report comprises the service design process carried out 2019-2020 in ECOLABNET project (funded by EU ERDF, Baltic Sea Region). VAMK University of Applied Sciences, Design Centre MUOVA was responsible for coordinating the service design process and operated as an expert in service design. Design Centre MUOVA has studied and utilised service design in business since 2007.

This report includes presentation service design process in Ecolabnet project. The service design process covered the creation of user personas, idea generation based on user personas, and the development of service journeys i.e. service processes for manufacturing SMEs and intermediary organisations.

*30th September 2020, Vaasa, Finland*

Miia Lammi and Sanna Peltonen | VAMK Design Centre MUOVA

# CONTENT OF THE REPORT

1

Aims of the Ecolabnet project

2

Service design process in the Ecolabnet project

3

User personas for SMEs and intermediary organisations

4

Service ideas for user personas

5

Service journeys of RDI services for eco-innovation

6

Join in the network

# AIMS OF THE ECOLABNET PROJECT

1

## Boost ecological innovations in manufacturing companies

Increase competences in eco-innovations among small and medium-size manufacturing companies

Produce demonstrations of eco-innovations to show different strategies of ecological innovations

Organise and participate in events for companies and increase their knowledge about eco-innovations

2

## Create a network of service providers for eco-innovations

Create easy access to transnational research and test infrastructures and expertise

Create collaboration models for companies, service providers and intermediary organisations

Increase collaboration competences in research and development organisations

# PURPOSE OF DESIGNING RDI SERVICES

- Manufacturing small and medium size companies (SMEs) have limited resources for collaborating with research, development and innovation organisations (RDIs) such as universities and consultant agencies.
- Efficient, user-friendly and desirable RDI services enable SMEs to have access to high-level expertise, recent research knowledge and RDI facilities.
- SMEs have diverse needs for support and therefore RDIs need to support ecological innovations throughout the value chain.
- Intermediary organisation (IoS) such as local, regional and national business developers have important role in facilitation of knowledge transfer.

# SERVICE DESIGN PROCESS IN ECOLABNET

---

Developing RDI services for manufacturing SMEs and intermediary organisations (IOs)

# SERVICE DESIGN

Is multidisciplinary service development through design processes and design methods.

Aims to improve service experience of service users (both service provider and customer).

Develops the service process and service elements (immaterial and material) i.e. touchpoints.

# SERVICE DESIGN PROCESS

Discover

Define

Design Council

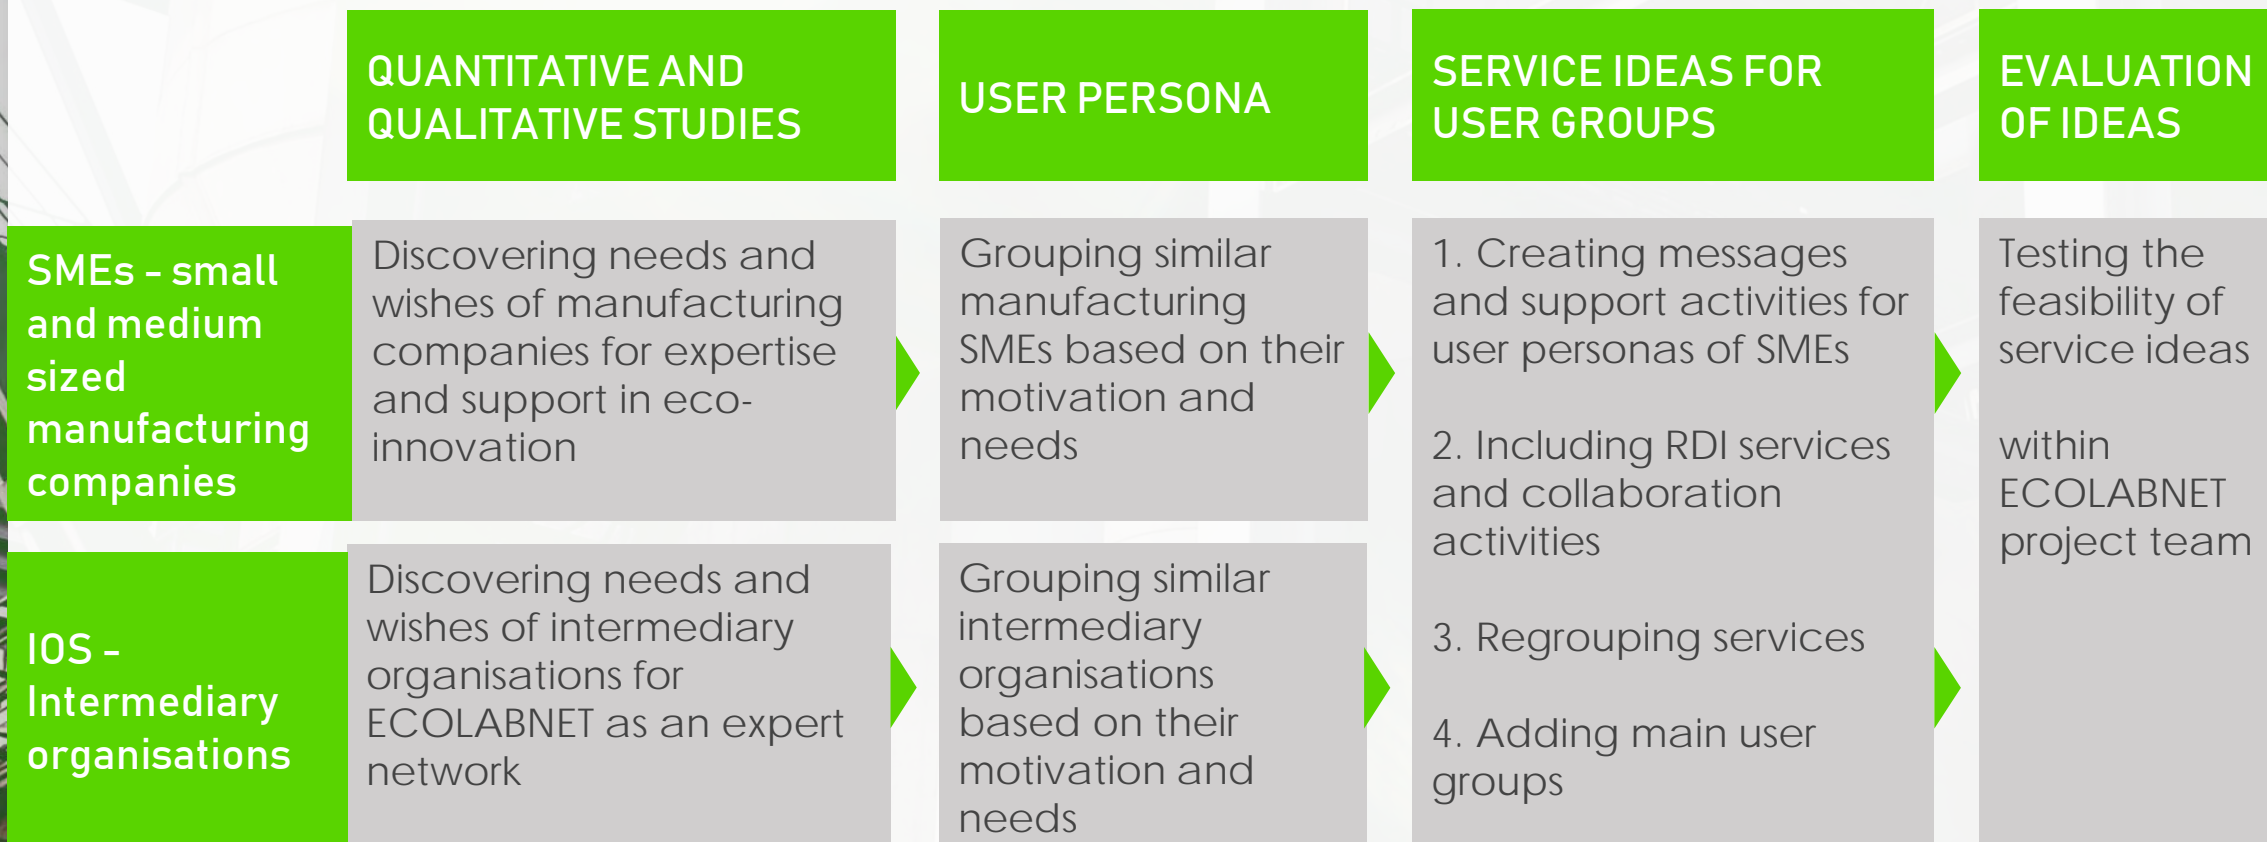

# SERVICE DESIGN ACTIVITIES IN ECOLABNET

- A survey and interviews studied the needs of SMEs for supporting eco-innovation and the role of intermediary organisation in development.
- Based on the research, user personas were created and used for guiding and inspiring the service idea generation.
- In idea generation, the messages and support activities were elaborated for each user personas in the ECOLABNET workshop 28.11.2019
- We crystallized messages for creating the change in SMEs and the ways of supporting their eco-innovation practices. The needs for expert services and collaboration activities were included in the service ideas from SME survey.
- The service ideas were categorised based on the nature of the service (information, networking and expert services).
- Suitable intermediary personas were added to service ideas as potential collaboration partner.
- Service journeys were built in an online workshop 28.4.2020.

# SERVICE DESIGN PROCESS IN ECOLABNET

# SERVICE DESIGN PROCESS IN ECOLABNET

## USE PROCESSES

Generating use processes of ECOLABNET services including transnational collaboration of RDIs, SMEs and IOs

## EVALUATION & PRIORITIZATION

1. Evaluating service ideas and processes with SMEs and intermediary organisations  
2. Choosing ECOLABNET services

## COLLABORATION TOOL

Developing the virtual tool for collaboration between RDIs, manufacturing SMEs and intermediary organisations

## SERVICE PACKAGES

Developing transnational service packages for supporting manufacturing SMEs and intermediary organisations

## DEVELOPMENT PROGRAM

Planning and implementing development activities in order to foster competences and practices related to cooperation with SMEs

# PERSONA CREATION

---

User profiles of manufacturing SMEs and intermediary organisations

## SERVICE DESIGN METHODS:

### USER PERSONA

A fictional and preferably research-based profile describing a user group

Includes users with similar interest

Guides and inspires service development

See Stickdorn and Schneider (2010). This is service design.

### Example

#### Forerunner dedicated to boating

I value creativity, freedom, curiosity and independence. My boat should tell about me as a boater and it is important that my boat stands out from other boats.

I value action more than money. Therefore, I prefer to do some things myself rather than buy ready-made products from the store. This is how I get my boat exactly the way I want it to be.

I value excitement, adventure and variety in my life. I like testing my boating skills and winning over myself. I appreciate a fast and high-performance boat so I can boat in challenging conditions.

Because I stay a lot in the boat and often travel overnight in the boat or on land, I appreciate the comfortable overnight accommodations, WS, cooking and entertainment facilities.

© MUOVA 2009 Envisioning services and products for boating. Research funded by Tekes

# STEPS IN PERSONA CREATION

## Survey

- Persona creations was taken into account in survey design
- Data was collected in 6 European countries during 2019

## Analysis

- Quantitative data analysis
- Factor analysis
- Cluster analysis

## Persona creation

- Different user groups with the similar needs and behavior were crystalized into user personas

# TWO TARGET GROUPS

1

## SME companies

Focus on motivating factors, barriers and eco-innovation specific development areas (within the next 3 years)

Data included 296 valid responses

6 clusters

2

## Intermediary organisations

Focus on the role and expertise of the intermediary organization in supporting SMEs' eco-innovation activities

The data included 106 valid responses

3 clusters

# SME USER PERSONAS

---

“Let's go to pool, Eco-innovation pool!”

# VISUALISATION OF SMES AS USER PERSONAS

# ECO-BOOSTER

- Eco-boosters are highly motivated in developing eco-innovations
  - To satisfy customer needs
  - Efficient use of resources
  - Strengthening corporate brand image
- Main barriers
  - Lack of capital
  - Certification costs
  - Limited access to external knowledge
- Companies have several focus areas covering whole company
  - Business
  - Development
  - Technology/Production

*"We are so excited about eco-innovations.  
There is so much to gain!"*

# ECO-BOOSTER

- Companies evaluate their knowledge in eco-innovation as **Medium/high**
- Companies see the eco-innovation stage as **Medium/high**
- Size of the company
  - Micro (up to 9 employees) 56,3 %
  - Small (10-49 employees) 33,3 %
- Industry
  - Food products 18,8 %
  - Not in manufacturing 16,7 %
  - Other manufacturing 12,5 %

# ECO-OPPURTUNIST

- Eco-opportunists are not interested in developing eco-innovations, unless they can provide
  - Potential business opportunities
  - Efficient use of resources
  - Reduction of environmental effects on the business operations
- No major barriers, but mainly
  - Lack of capital
  - Limited access to external knowledge
  - Lack of suitable tools and methods
- Only focus areas
  - Business (value chain assessment)

*"If there is business, we are in!"*

# ECO-OPPORTUNIST

- Companies evaluate their knowledge in eco-innovation as **Medium/high**
- Companies see the eco-innovation stage as **Medium/high**
- Size of the company
  - Micro (up to 9 employees) 50,0 %
  - Small (10-49 employees) 21,1 %
  - Medium (50-249 employees) 21,1 %
- Industry
  - Not in manufacturing 36,8 %
  - Machinery and equipment 10,5 %
  - Other manufacturing 10,5 %

# ECO-OPTIMIZER

- Eco-optimizers are interested in eco-innovations mainly for cost reduction
  - Cost reduction
  - Efficient use of resources
  - To satisfy customer needs
- No major barriers, but mainly
  - Lack of alternative materials
  - Lack of capital
  - Uncertain return on eco-innovation investment
- Only focus areas
  - Technology/Production (Increasing efficiency)

*"Eco-innovation is interesting if it reduces costs. We need to make some calculations first."*

# ECO-OPTIMIZER

- Companies evaluate their knowledge in eco-innovation as **Medium/low**
- Companies see the eco-innovation stage as **Medium/low**
- Size of the company
  - Micro (up to 9 employees) 41,7 %
  - Small (10-49 employees) 36,1 %
  - Medium (50-249 employees) 19,4 %
- Industry
  - Other manufacturing 19,4 %
  - Machinery and equipment 13,9 %
  - Food products 13,9 %

# ECO-DEVELOPER

- Eco-developers are interested in eco-innovations mainly for Differentiation and brand image
  - To satisfy customer needs
  - Differentiate from competitors
  - Efficient use of resources
  - Strengthening corporate brand image
- No major barriers, but mainly
  - Lack of capital
  - Lack of alternative materials
  - Uncertain return on eco-innovation investment
- Focus areas cover
  - Business
  - Development
  - Technology/Production

*"There are so many exciting things to do with eco-innovation!"*

# ECO-DEVELOPER

- Companies evaluate their knowledge in eco-innovation as Medium/high
- Companies see the eco-innovation stage as Medium
- Size of the company
  - Micro (up to 9 employees) 40,0 %
  - Small (10-49 employees) 29,1 %
- Industry
  - Rubber and plastic products 21,8 %
  - Machinery and equipment 18,2 %
  - Other manufacturing 14,5 %

# ECO-CAUTIOUS

- Eco-cautiouses are interested in eco-innovations mainly for Differentiation and brand image as well as Reducing costs and resource use
  - To comply with legislation
  - Differentiate from competitors
  - Strengthening corporate brand image
  - Cost reduction
- Financial uncertainty of eco-innovation is the major barrier
  - Uncertain return on eco-innovation investment
  - Lack of capital
  - Uncertain demand from the market
  - Lack of in-house expertise
- No important Focus areas

*"Eco-innovation is good for the company brand! But is it worth it?"*

# ECO-CAUTIOUS

- Companies evaluate their knowledge in eco-innovation as **Medium/high**
- Companies see the eco-innovation stage as **Medium/low**
- Size of the company
  - Micro (up to 9 employees) 53,8 %
  - Small (10-49 employees) 23,1 %
- Industry
  - Not in manufacturing 23,1 %
  - Wearing apparel 15,4 %
  - Food products 11,5 %
  - Machinery and equipment 11,5 %

# ECO-LAGGARD

- Eco-laggards are interested in eco-innovations mainly for reducing costs and resource use
  - Cost reduction
  - To comply with legislation
  - Efficient use of resources
- Legislation and certification costs as well as financial uncertainty of eco-innovation are the major barriers
  - Uncertain return on eco-innovation investment
  - Uncertain demand from the market
  - Certification costs
  - Legislative demands
- No important Focus areas

*"Yes, but we need to think about financial issues.."*

# ECO-LAGGARD

- Companies evaluate their knowledge in eco-innovation as **Medium/low**
- Companies see the eco-innovation stage as **Lowest stage**
- Size of the company
  - Micro (up to 9 employees) 12,5 %
  - Small (10-49 employees) 18,8 %
  - **Medium (50-249 employees) 62,5 %**
- Industry
  - **Not in manufacturing 31,3 %**
  - Fabricated metal products 18,8 %
  - Computer, electronic and optical products 18,8 %

# USER PERSONAS FOR INTERMEDIARY ORGANISATIONS

---

“Let’s meet at the pool, Eco-innovation pool!”

# VISUALISATION OF ALL USER PERSONAS

# PROMOTER

- In providing eco-innovation support services, the most important **roles** for Promoters are
  - Commercialisation
  - Fostering networking and partnerships
  - Branding and legitimization (e.g. creating distinct brand and social acceptance)
- Main fields of expertise
  - Potential business opportunities
  - To satisfy customer needs
  - Differentiating from competitors
- Main partners
  - Commercial consultants
  - Universities and research institutions
  - Regional business development organizations

*"Commercialisation and branding? – We can help you with our business network!"*

# NETWORKER

- In providing eco-innovation support services, the most important **roles** for Networkers are
  - Fostering networking and partnerships
  - Information gathering and dissemination
  - Forecasting and road mapping (e.g. providing avenues for firms in eco-innovation)
- Main fields of expertise
  - Efficient use of resources
  - Reduction of environmental impact on business operations
  - Cost reduction
  - Potential business opportunities
- Main partners
  - Regional business development organizations
  - Universities and research institutions

*"Networking and information? – We support you also in eco-innovations."*

# DEALER

- In providing eco-innovation support services, the most important **roles** for Dealers are
  - Providing access to financial, human and knowledge resources for eco-innovation
  - Commercialisation
  - Fostering networking and partnerships
  - Information gathering and dissemination
- Main fields of expertise
  - To satisfy customer needs
  - Potential business opportunities
  - Meeting stakeholder expectations
  - Differentiating from competitors
- Main partners
  - Universities and research institutions
  - Industry associations

*"Developing eco-innovations? – We can provide you access to resources!"*

# SERVICE IDEAS

---

Developing ideas for RDI services for ecological innovation in manufacturing SMEs

# USER-CENTERED IDEA GENERATION

Service ideas were generated through analytical and creative process.

1. User personas of manufacturing SMEs were used as a starting point.
2. Messages and support activities were ideated for different user personas of SMEs
3. Potential RDI services and collaboration activities were included in the descriptions.
4. Service categories were identified from the service descriptions.
5. Main user groups were included in the service ideas based on their needs.

# IDEA GENERATION FOR USER PERSONAS

---

Developing service solutions for different user groups

# SERVICE IDEAS FOR ECO-DEVELOPER

Communication aims at starting collaboration  
*Collaborate with the best in eco-innovation!*  
*Funding and expertise are available.*

RDI services  
Funding, development program/project,  
expert/ lab services related to other alternative  
materials and branding

Development project  
High tech solution in collaboration with special  
researchers, proven evidence of results

Collaboration activities  
Prioritizing the development activities in order to minimize risks, find expertise for  
development and open information for learning more

# SERVICE IDEAS FOR ECO-OPTIMIZER

Communication aims at assuring the investments  
*Eco-innovation is feasible business, verified!*  
*Funding and expertise is available.*

RDI services

Resource efficiency & alternative materials & customer needs, branding

Development project

Legal issues drives eco-innovation, focus in resource efficiency, reliable calculations and estimations

Collaboration activities

Presenting real life cases with calculations, bio-based material solutions, evaluating the impact of innovation, small development activities, coaching, events

# SERVICE IDEAS FOR ECO-CAUTIOUS

Communication aims at creating confidence  
*Find markets for eco-innovation.*  
*Funding is available!*

RDI services  
Legislation, standards & ROI, demand survey & funding for certification & green branding based on true differentiation factors

Development project  
Legal issues drives eco-innovation, focus in resource efficiency, market understanding, branding

Collaboration activities  
Supportin small first steps, events and information in their territory

# SERVICE IDEAS FOR **ECO-OPPORTUNIST**

Communication aims at broader collaboration  
*Open markets for true eco-innovations!*

RDI services  
Commercialization of eco-innovation

Development project  
Development collaboration with other companies to  
gain required resources, branding, quick returns

Collaboration activities  
General information about the real-life cases, events, branding  
projects

# SERVICE IDEAS FOR ECO-BOOSTER

Communication aims at starting radical innovation  
*Find out what's new in eco-innovation!*

RDI services  
Legislation, innovation, branding, distribution chain

Development project  
Technology & business development on food industry

Collaboration activities  
Finding the focus for development, managing and resourcing  
development activities, applying new research results, enabling  
new market entry, scaling up

# SERVICE IDEAS FOR ECO-LAGGARDS

Communication aims at encouraging the development  
*Eco-business is better business! See great results!*

RDI services  
Legislation, innovation, branding, distribution chain

Development project  
Legal drivers, focus on resource efficiency, reliable estimations of benefits

Collaboration activities  
Support during the first steps of eco-innovation, planning small and practical experiments

# IDEAS OF RDI SERVICES

---

Identifying and developing service ideas

# SERVICE IDEAS

## INFORMATION SERVICES

Informing SMEs about eco-innovation and support activities

## NETWORKING SERVICES

Networking with potential collaboration partners

## LEGAL SERVICES

## MARKETING & GRAPHIC DESIGN SERVICES

# TEMPLATE FOR CREATING SERVICE JOURNEYS

SERVICE NAME	Service moment	Click to add text									
	Service environment	Click to add text									
	Description of service moment from user	Click to add text									
	Action and interaction	Click to add text									
	Description of action and interaction	Click to add text									
	Participants	Click to add text									
	Description of participants	Click to add text									

# INSTRUCTIONS FOR USING TEMPLATE

Environment & action/interaction stickers: Copy a sticker

Build service journey. Paste stickers & write down explanations.

Persona stickers: Copy needed stickers

The template consists of a grid with columns and rows. The columns are labeled with numbers 1 through 7. The rows are labeled with different aspects of the service journey. The grid is divided into two main sections: 'Service environment' and 'Service journey'. The 'Service environment' section includes rows for 'Description of service environment', 'Action and interaction', 'Description of action and interaction', 'Participants', and 'Description of participants'. The 'Service journey' section includes a row for 'Service journey' and a row for 'Service journey'. The grid is populated with various stickers representing different environments and actions. A green arrow points from the 'Service environment' section to the 'Service journey' section, indicating the flow of the journey.

# INSTRUCTIONS ABOUT SERVICE JOURNEY TASK

Aim was to learn about service journey method and create first use processes.

One team focuses on one user group (user persona) using one service.

## 1. **Service moment: What are the main phases of the service?**

- Describe how service flows on a general level. Start the process from upper left corner and use the amount of service moments you need for describing your service.
- Add slides if you need to describe a longer process.
- Describe the process starting from identification of the need. Then describe the first contact with the service, which can be information or one form of service. Then describe the necessary moments for service use.
- The moments can change when you describe the activities more in detail. You can add, change or remove a service moment during the workshop.

# INSTRUCTIONS ABOUT SERVICE JOURNEY TASK

## 2. Service environment: Where does this service moment occur?

- Define the environment to each service moment.
- Copy one service environment "sticker" from the area above the slide. If you don't find suitable sticker, choose an empty one.
- Describe service environment in detail on the text box (description of service environment) if necessary.

## 3. Action and interaction: What is the main form of interaction in this service moment?

- Define the form of interaction and activity by copying information "sticker" and place it on the circle.
- Describe the content of communication or the activity in detail in the text box below (description of action and interaction).

# INSTRUCTIONS ABOUT SERVICE JOURNEY TASK

## 4. Participants: Who do participate in this service moment?

- Define the form the participation to each service moments.
- Copy "persona stickers" to service moment and describe the participants in more detail in the text box if necessary.
- Does ECOLABNET have some role in the service moment?

## 5 minutes before the time ends: saving & key findings

Save the service journey.

Discuss about the role of ECOLABNET in this service.

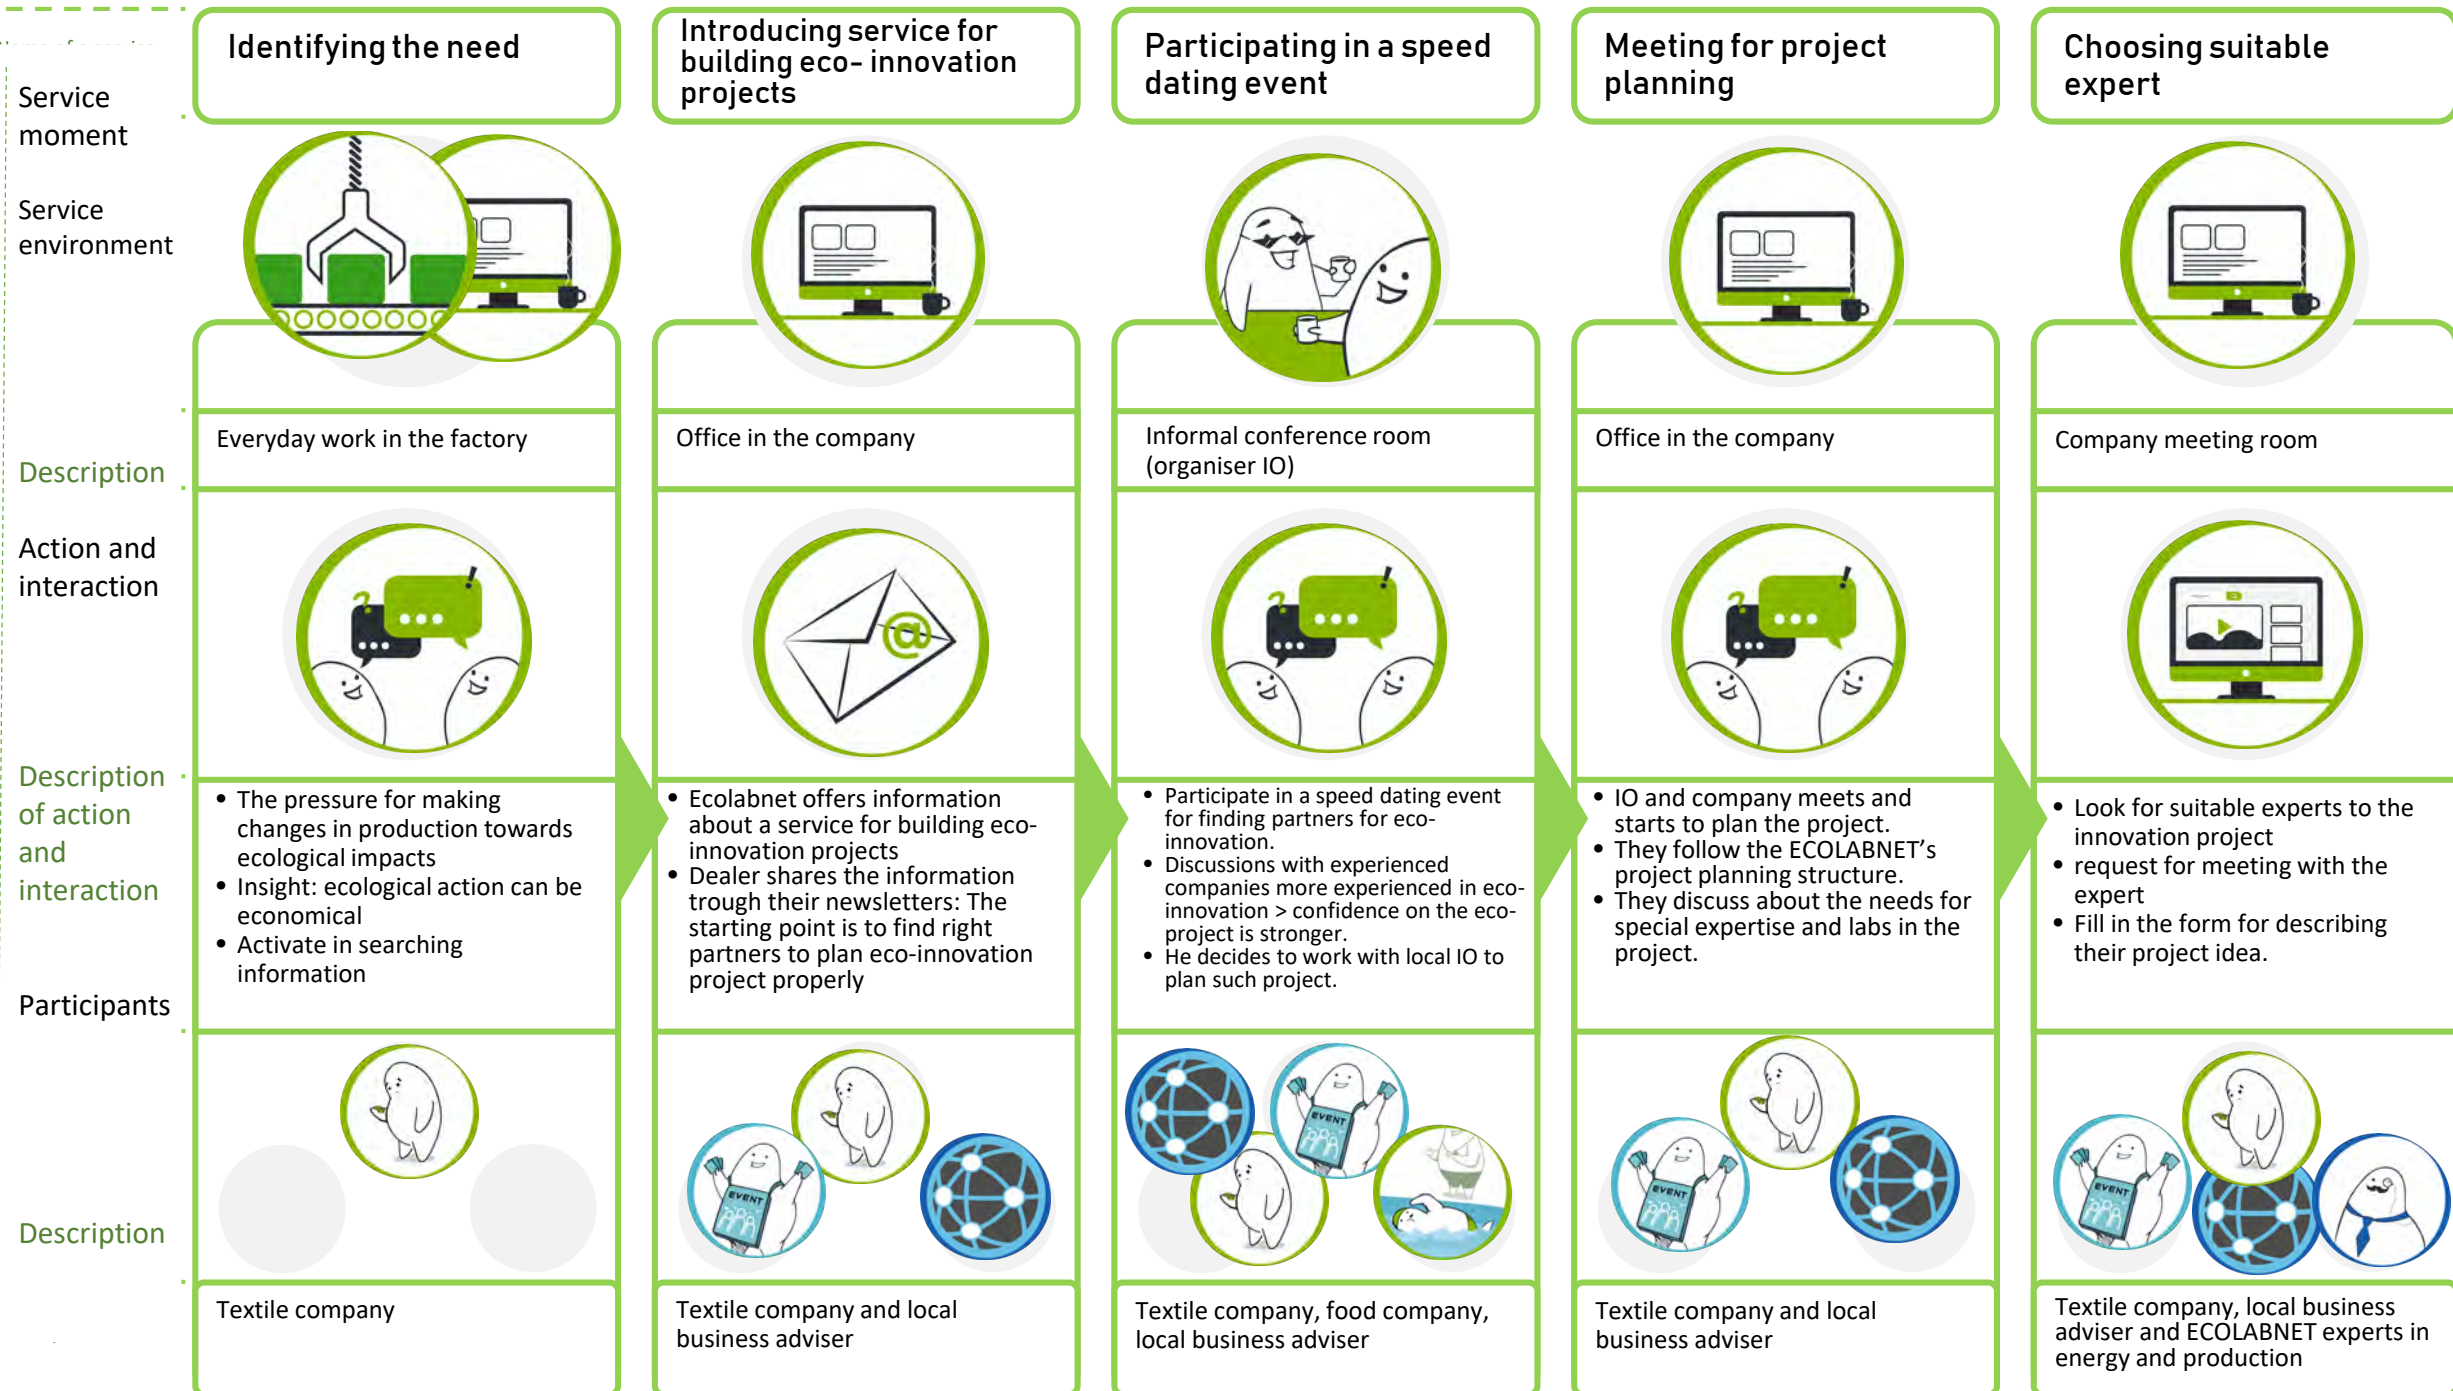

# EXAMPLE OF FILLING IN A TEMPLATE

---

Use processes of ecolabnet services

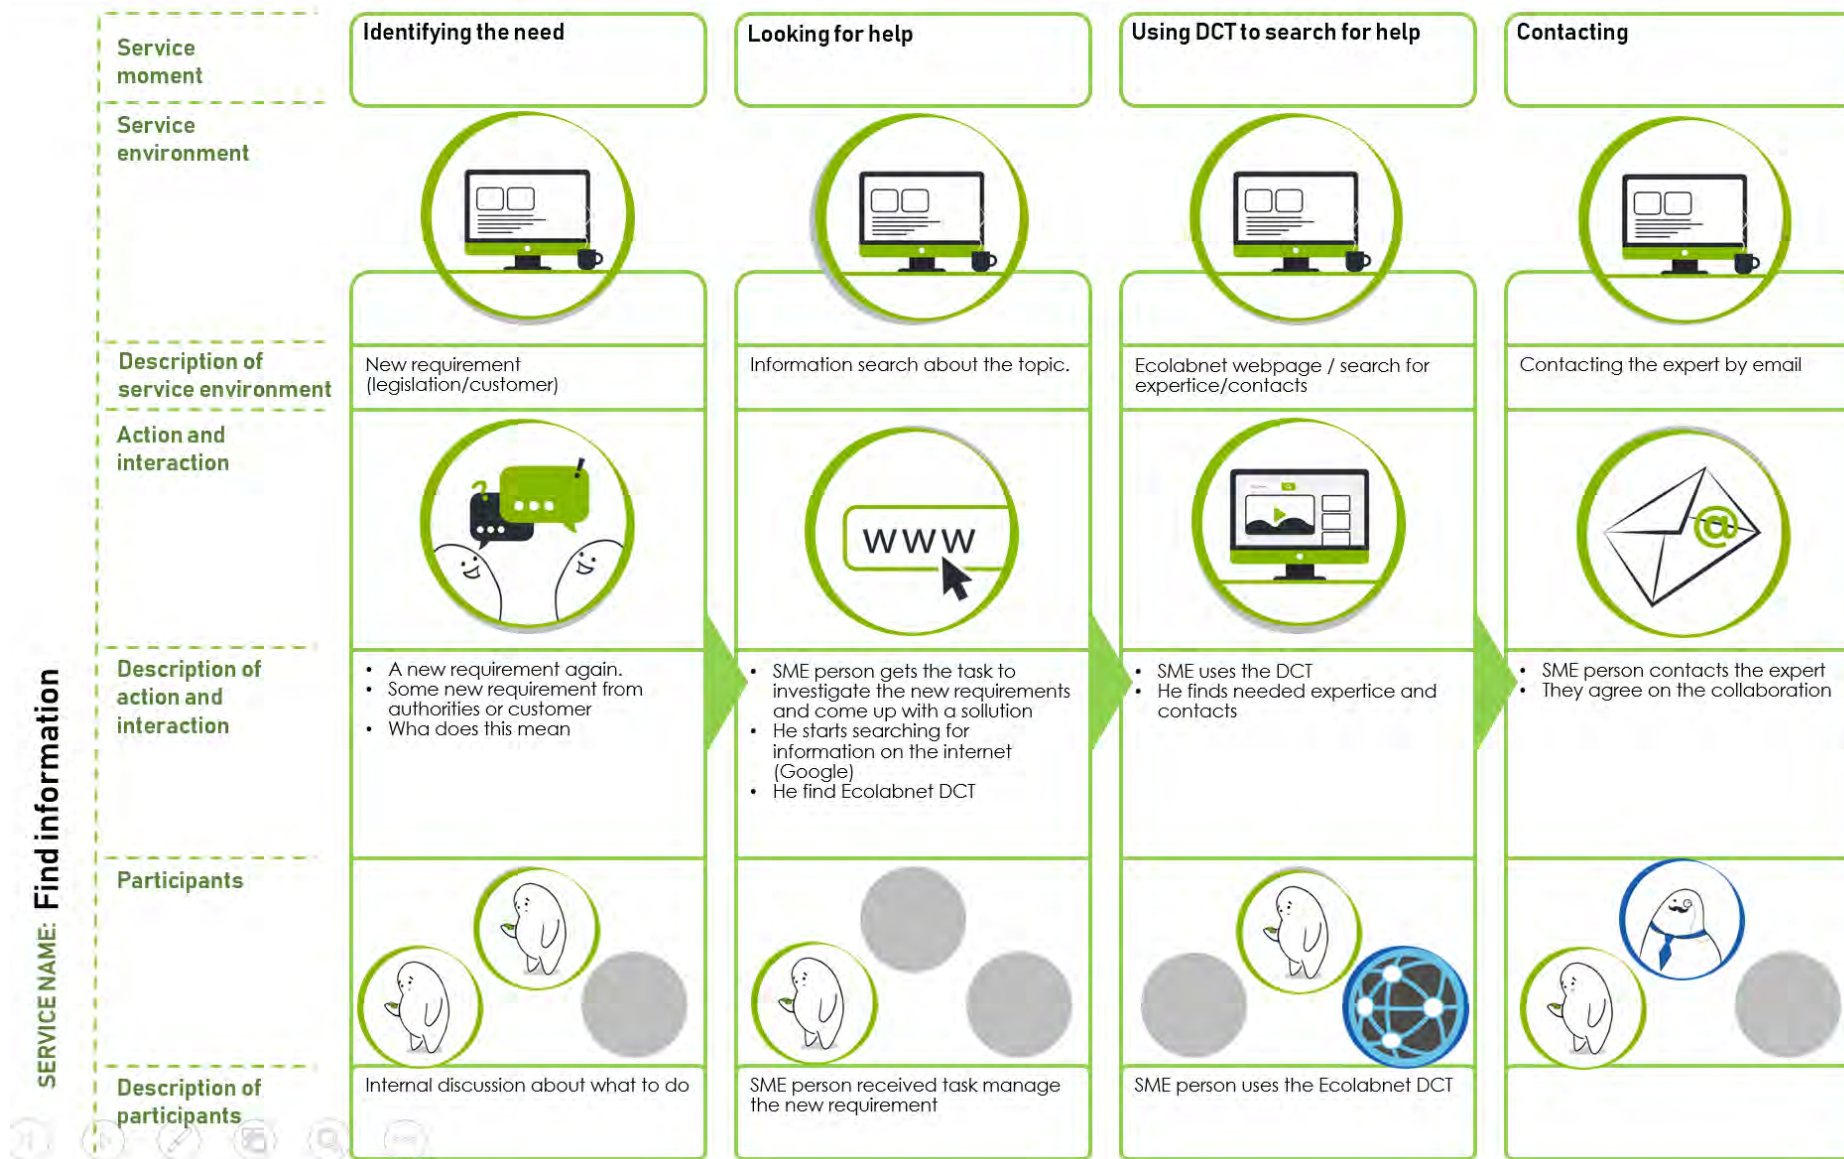

# SERVICE JOURNEYS FOR ECOLABNET

---

Results of transnational workshop 28.4.2020

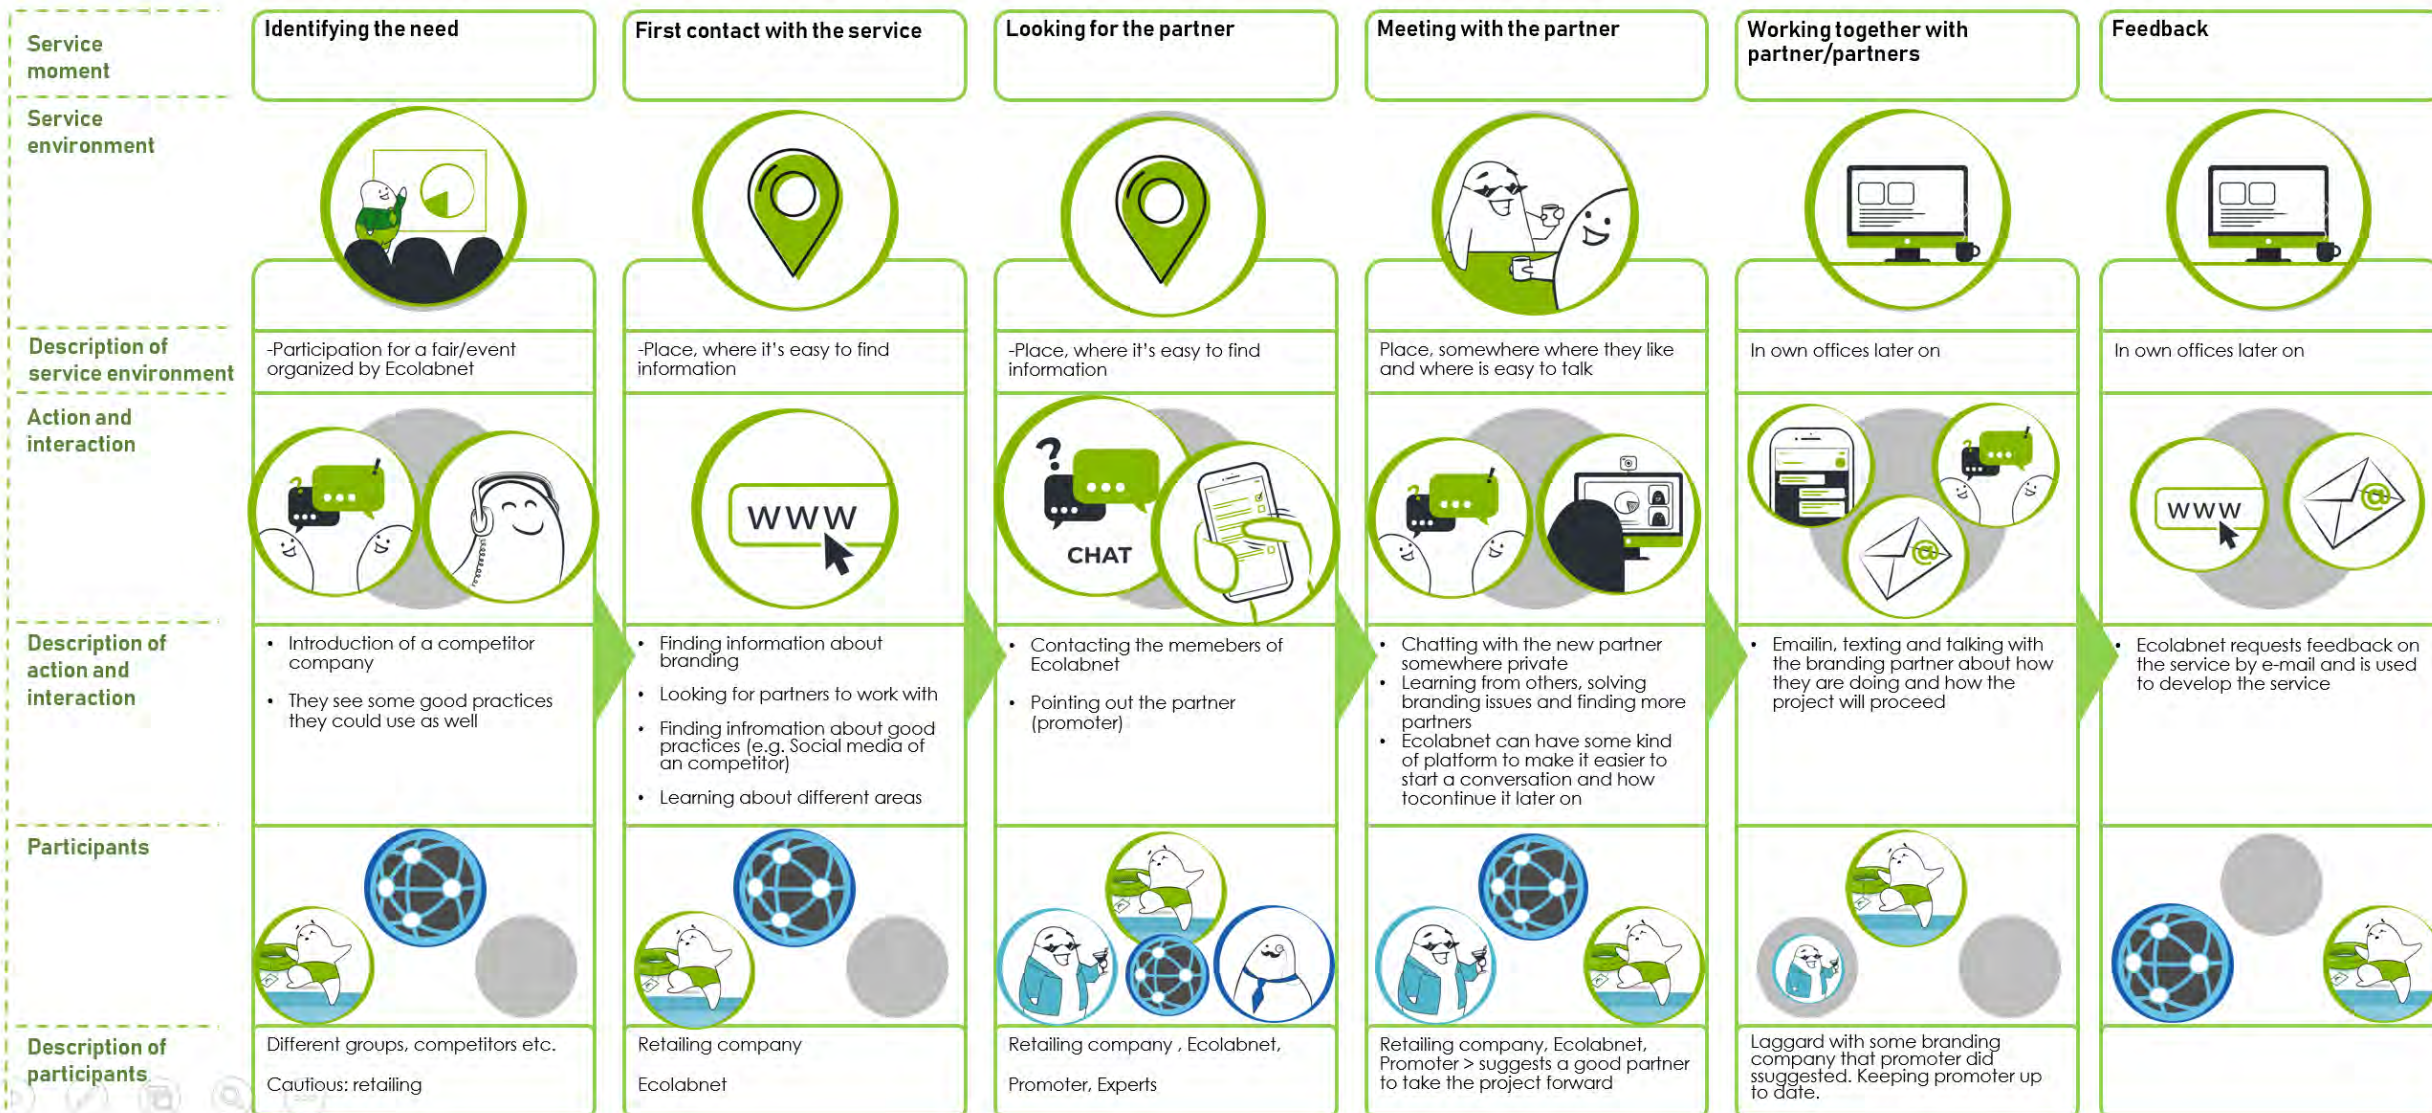

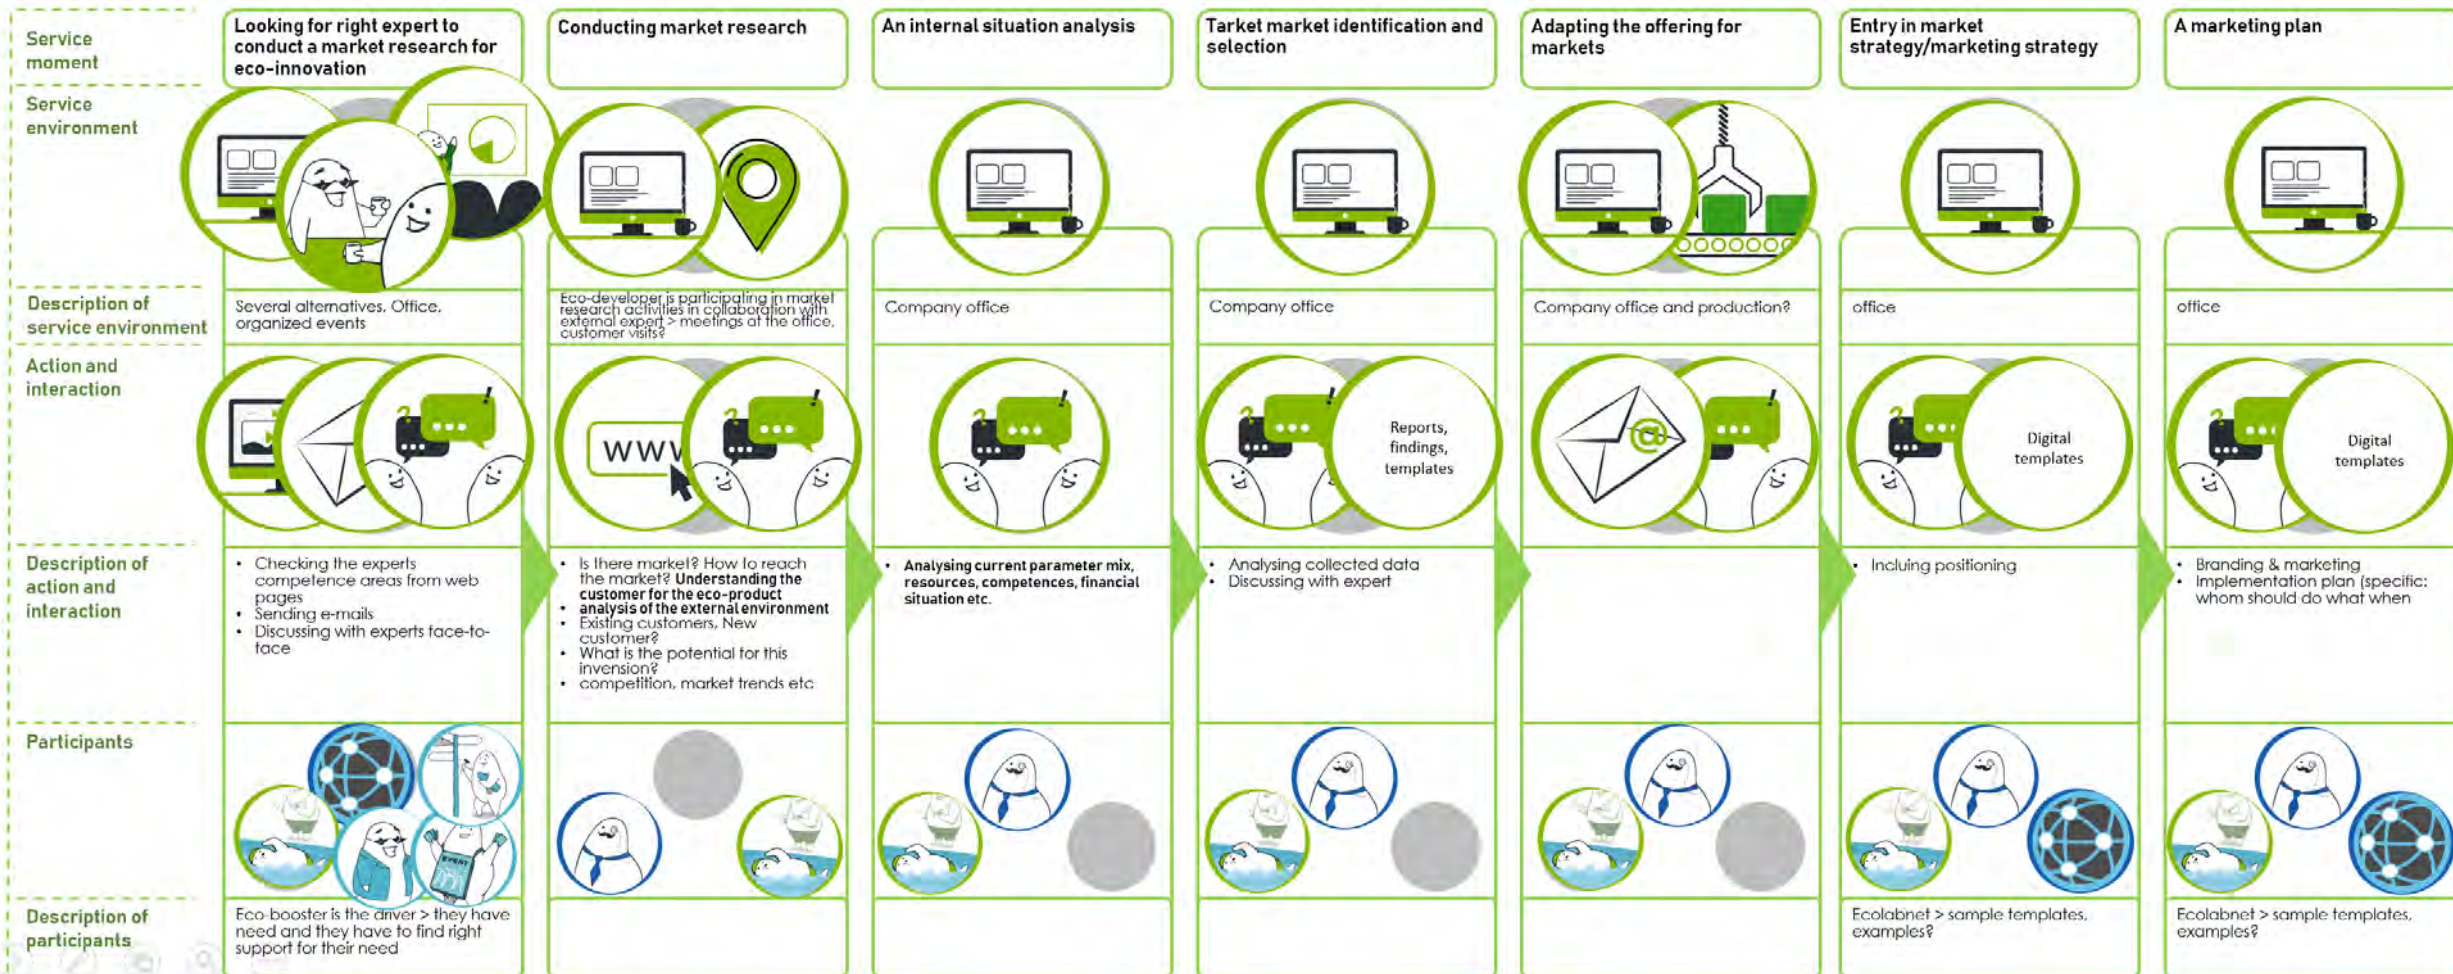

Service moment	Insight about being more cost-effective through eco-innovation	Opportunities available!	Forum of interaction - Ecolabnet	Clarify development steps with support organisations/experts
Service environment				
Description of service environment	Events for companies, web articles about eco-innovation strategies	Ecolabnet website & discussion with intermediary organisation	Event targeted at companies: eco-innovation as subtopic	Meeting
Action and interaction				
Description of action and interaction	<ul style="list-style-type: none"> <li>Participating in events and reading about eco-innovation strategies</li> <li><b>Eco-innovation could mean less expensive</b> production &gt; It is sustainable business, which adds to the bottom line!</li> <li>Eco-Production &amp; eco-materials</li> </ul>	<ul style="list-style-type: none"> <li>Information about sustainable business: ecological production and materials</li> <li>Need more time for reflecting</li> <li>Doing research</li> <li>Discussions with intermediary organisation for considerations &gt; insights of opportunities</li> <li>Demonstrators to be explored</li> </ul>	<ul style="list-style-type: none"> <li>A presentation of the network</li> <li>With demonstrations</li> <li>And with experiences of the company</li> <li>Simple consultation after the presentation</li> <li>A couple of slides of ECOLABNET</li> <li>Describe a journey of an experience (video)</li> </ul>	<ul style="list-style-type: none"> <li>Ecolabnet's digital collaboration tool</li> <li>Calculating and comparing different options</li> <li>Ideas need to be protected</li> <li>Customised calculation tool for evaluating solutions (not open access)</li> </ul>
Participants				
Description of participants			Technical experts & marketing / management experts for financial issues	

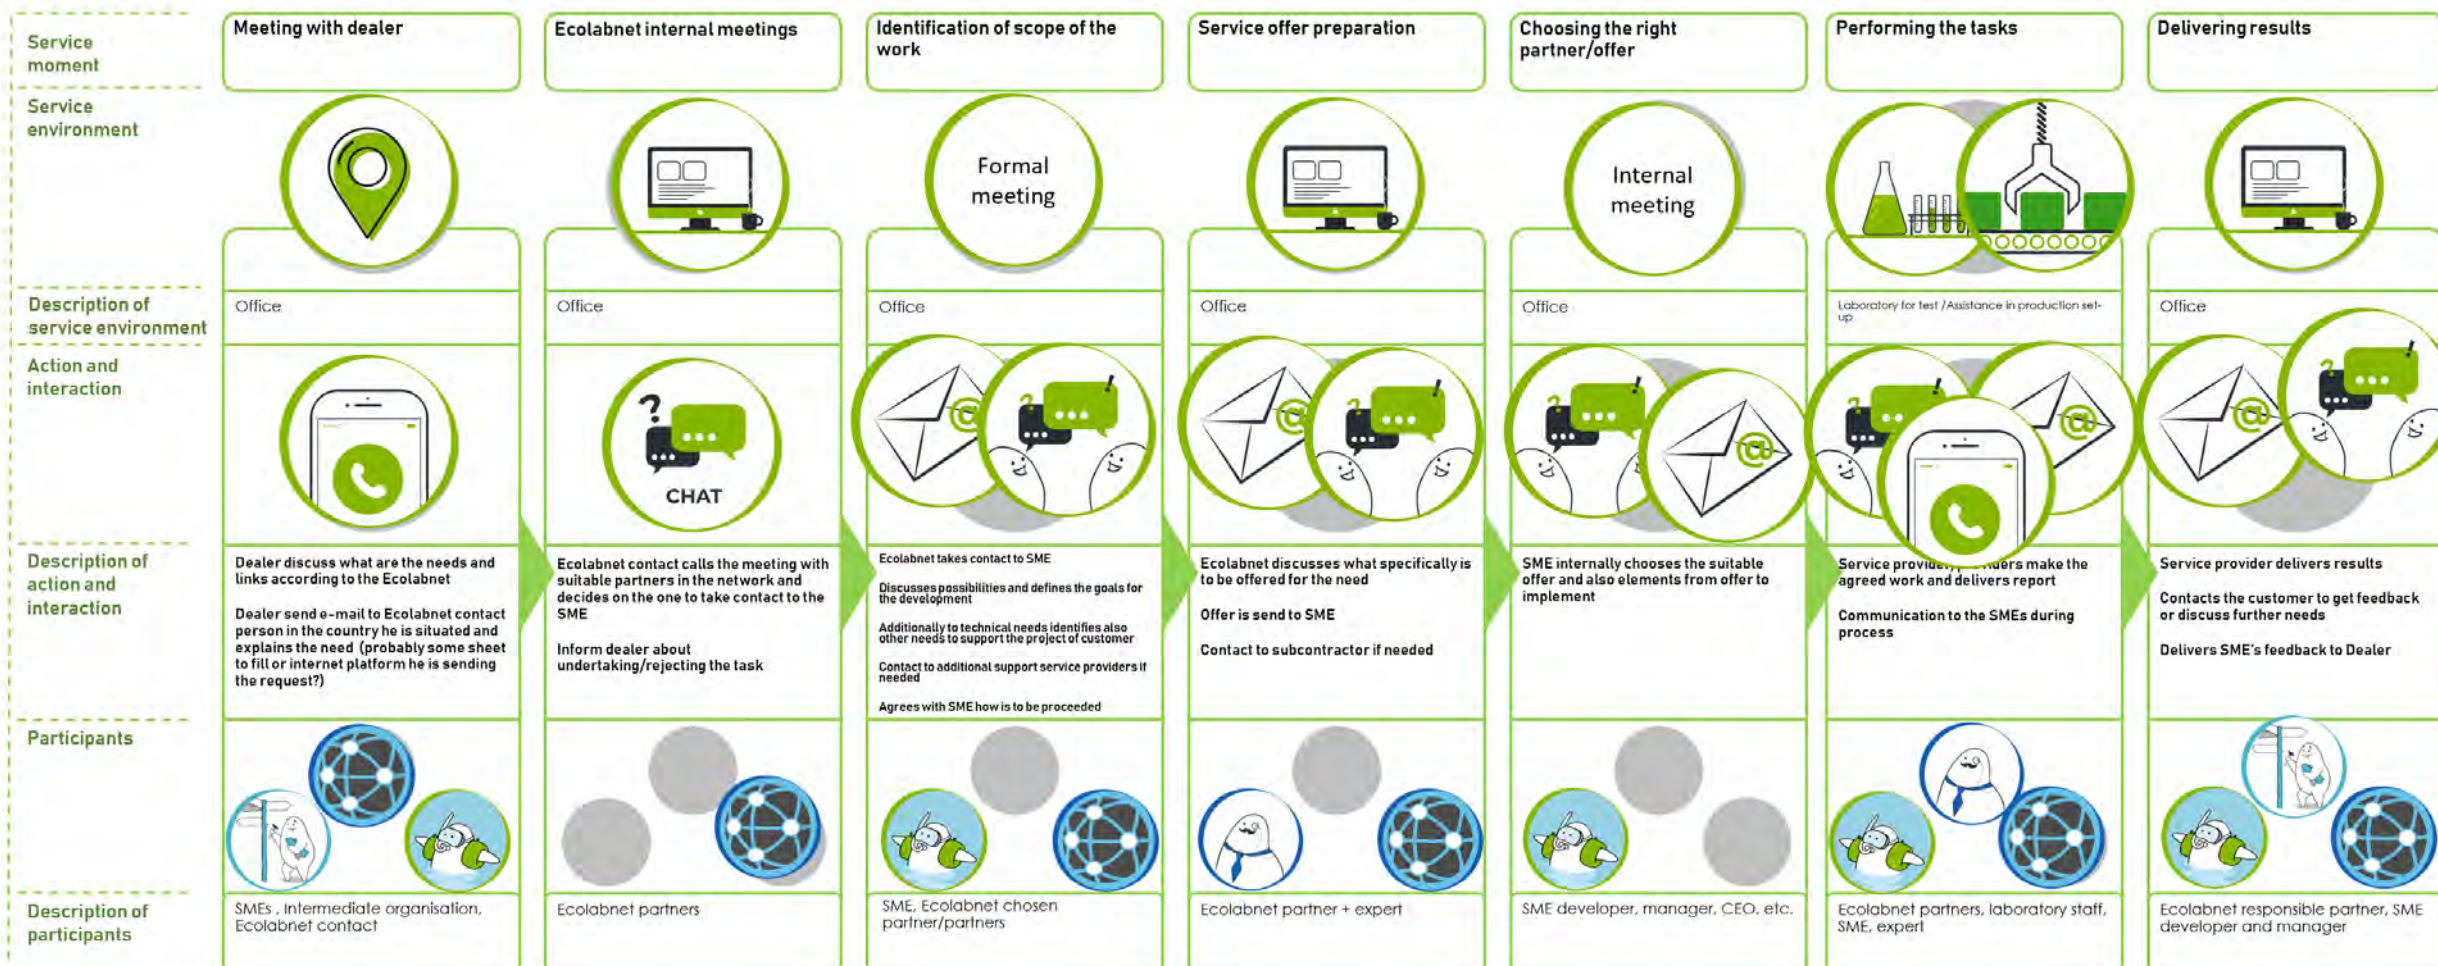

Service moment	Identifying the need	Introducing the service	Collaboration activities	Meeting other companies or partners	Development of the project	Telling about results	Background for next project
Service environment							
Description of service environment	In the company, factory, work environment etc....	Office or any networking / communication environment	Some organized meeting with partners face 2 face	Organized meeting online or face 2 face.	Discussing about project results and development with partners	Event online or chosen place	Recommendation for attendees for continuing the project / service
Action and interaction	 CHAT	 CHAT					
Description of action and interaction	<ul style="list-style-type: none"> <li>Conversations with partners or workers</li> <li>Searching, updating or acquiring information</li> </ul>	<ul style="list-style-type: none"> <li>Discussing the ideas</li> <li>Showing different aspects</li> <li>Benefits and opportunities</li> </ul>	<ul style="list-style-type: none"> <li>Looking for Possible collaborations</li> <li>Introducing projects</li> <li>Introducing services</li> </ul>	<ul style="list-style-type: none"> <li>Design process protocol</li> <li>Looking for ways to collaborate in certain projects or tasks</li> </ul>	<ul style="list-style-type: none"> <li>Developing project management, services and other tools</li> </ul>	<ul style="list-style-type: none"> <li>Presenting results</li> <li>Online chat</li> <li>Videos</li> <li>Website</li> <li>Organized event</li> </ul>	<ul style="list-style-type: none"> <li>Emailing, in meetings, happening, calling, workshop</li> </ul>
Participants							
Description of participants	Can be partners (any) or from other organizations or networks.	Partners (any), other organizations, promoter connecting partners, networkers	Chosen partner SMEs, networkers	Chosen partner SME (developer), promoter or outside expert.	Chosen partner SME (developer), dealer or outside expert.	Any SME group, networkers, promoters	Contact persons who could be interested developing ideas / services

# NEXT STEPS

Create service packages for user groups

- Easy to get access, understand, buy, and utilize expertise and labs
- Organise service resources efficiently to produce the service

Do experiments and prototypes

- Facilitate the strategic experiments: set goals and follow results
- Test & Learn – Create an iterative service development cycle

Establish the development program

- Involve people inside organisation for creating commitment and learning
- Foster service mindset: leadership and customer-centric approach
- Plan, develop and implement the internal service system for the production of the services
- Develop partnerships throughout the value chain: research, development and innovation actors, intermediary organisations and manufacturing companies

## SERVICE PACKAGE

A bundle of services, which creates value for customers

Value is supported by material and immaterial ways

© MUOVA 2014 User- and future-oriented service design for experiential voyage | Sub-project of Midway Alignment of the Bothnian Corridor, Vasek
